

# Journal of Clinical Pathology

Upper Panel. Diagnostic studies for Plasmodium species and illustration of antigen excess. Peripheral blood smear from patient displaying abundant intraerythrocytic ring forms (including occasional appliqué forms), most consistent with Plasmodium falciparum. Lower Panel. Molecular subtypes distribution SCLC. (upper) The pie chart illustrating the percentage of each dominant molecular subtype tumour in specimens besides the paired biopsy ( $n=195$ ). (lower) Representative histopathological images of SCLC by molecular subtypes. ASCL1, achaete-scute family BHLH transcription factor 1; NEUROD1, neuronal differentiation 1; POU2F3, POU class 2 homeobox 3; SCLC, small-cell lung carcinoma; YAP1, Yes1-associated transcriptional regulator.
